## **BIOLOGY**

1.	By which of the following means Acquired immunodeficiency syndrome does
	not spreads:

- (A) Blood transfusion
- (B) Sexual contact
- (C) Using the same needle for injection
- (D) Hand shake

6.

- 2. Glycolysis operates in which part of cell
  - (A) Mitochondria (B) Chloroplast (C) Ribosome (D) Cytosol
- 3. Ribosomes of prokaryotes are:
  - (A) 80S type (B) 70S type (C) 60S type (D) 50S type
- 4. Five kingdom classification was proposed by
  - (A) R. H. Whittaker (B) Strassburger
  - (C) Klug and cummings (D) Carolus Linneaus
- 5. "Survival of the fittest" theory of evolution was proposed by
  - (A) Charles Darwin (B) Lamarck
  - (C) Hugo de Varies (D) None of the above
  - (A) Cytosol (B) Ribosome (C) Nucleus (D) Chromosome
- 7. Light reaction of photosynthesis occurs in

Site of the protein synthesis in cell is

- (A) Chloroplast stroma (B) Thylakoid lumen
  - (C) Thylakoid membrane (D) Chloroplast inner membrane
- 8. Angiosperms first appeared in
  - (A) Jurassic period (B) Cretaceous period
    - (C) Triassic period (D) Permian period
